## Abstract

Notes covering OpenAM prerequisites, fixes, known issues. OpenAM provides open source Authentication, Authorization, Entitlement and Federation software.

This work is licensed under the Creative Commons Attribution-NonCommercial-NoDerivs 3.0 Unported License<sup>1</sup>.

To view a copy of this license, visit <http://creativecommons.org/licenses/by-nc-nd/3.0/> or send a letter to Creative Commons, 444 Castro Street, Suite 900, Mountain View, California, 94041, USA.

Trademarks are the property of their respective owners.

UNLESS OTHERWISE MUTUALLY AGREED BY THE PARTIES IN WRITING, LICENSOR OFFERS THE WORK AS-IS AND MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND CONCERNING THE WORK, EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING, WITHOUT LIMITATION, WARRANTIES OF TITLE, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT, OR THE ABSENCE OF LATENT OR OTHER DEFECTS, ACCURACY, OR THE PRESENCE OF ABSENCE OF ERRORS, WHETHER OR NOT DISCOVERABLE. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF IMPLIED WARRANTIES, SO SUCH EXCLUSION MAY NOT APPLY TO YOU.

EXCEPT TO THE EXTENT REQUIRED BY APPLICABLE LAW, IN NO EVENT WILL LICENSOR BE LIABLE TO YOU ON ANY LEGAL THEORY FOR ANY SPECIAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES ARISING OUT OF THIS LICENSE OR THE USE OF THE WORK, EVEN IF LICENSOR HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

# Chapter 1. What's New in OpenAM 10.0.0

OpenAM 10.0.0 fixes a number of issues, and provides the following additional features.

## Major New Features

- OpenIG, the ForgeRock Identity Gateway<sup>1</sup>, is a high-performance reverse proxy server with specialized session management and credential replay functionality. OpenIG integrates well with OpenAM, and there is no need to modify the target application or the container in which it runs.

OpenIG also includes the Federation Gateway, which enables federation capabilities for applications that cannot be modified to use the Fedlet and SAML 2.0.

- OpenAM now uses OpenDJ 2.4.5 as the embedded data store (OPENAM-960<sup>2</sup>).

OpenAM now also uses the OpenDJ LDAP SDK.<sup>3</sup>

- OpenAM now provides JSON output through the identity services REST interface (OPENAM-940<sup>4</sup>).
- OpenAM now supports adaptive risk authentication (OPENAM-846<sup>5</sup>). You configure the adaptive risk authentication module to assess risks, and then you add the module into an authentication chain. The module determines whether to require further authentication processing based on assessment of the risk involved during authentication. Adaptive risk authentication lets you require more from users when they login from an unfamiliar location, from a new device, after a long period during which the account remained idle, and so forth.
- OpenAM supports a new SAML 2.0 IdP Adapter plug-in for additional flexibility. The adapter lets the system handle situations that arise when the identity provider needs to perform additional processing before releasing the assertion, or when interaction with the user is needed before releasing it. The IdP Adapter class implementing the plugin can be configured through the console (OPENAM-700<sup>6</sup>).

---

<sup>1</sup> <http://openig.forgeroock.org/>

<sup>2</sup> <https://bugster.forgeroock.org/jira/browse/OPENAM-960>

<sup>3</sup> The Java EE deployment container in which OpenAM runs can potentially expose leaks in OpenDJ LDAP SDK (OPENDJ-388).

<sup>4</sup> <https://bugster.forgeroock.org/jira/browse/OPENAM-940>

<sup>5</sup> <https://bugster.forgeroock.org/jira/browse/OPENAM-846>

<sup>6</sup> <https://bugster.forgeroock.org/jira/browse/OPENAM-700>

- 
- OpenAM now provides an OAuth 2.0 Client authentication module (OPENAM-679<sup>7</sup>).
  - Multiple improvements in the OpenAM upgrade process streamline the move to the new version (OPENAM-626<sup>8</sup>).
  - OpenAM now supports interoperability with LDAP servers that implement the (Behera) Internet-Draft, Password Policy for LDAP Directories<sup>9</sup> (OPENAM-613<sup>10</sup>).

## Additional New Features

- Setup wizards make it easier to use OpenDJ as the identity repository.
- OpenAM now allows you to differentiate Login UI buttons using CSS (OPENAM-977<sup>11</sup>).
- OpenAM now allows authentication modules to be installed as a single .jar file (OPENAM-916<sup>12</sup>).
- OpenAM has improved console configuration for handling services such as Authentication Core Settings and Identity Repositories (OPENAM-887<sup>13</sup>).
- The **ssoadm** command now provides subcommands to manage entitlement application types: **create-appl-type**, **delete-appl-types**, **list-appl-types** (OPENAM-872<sup>14</sup>).
- OpenAM console now includes many more helpful hints and built-in documentation (OPENAM-805<sup>15</sup>).
- OpenAM now lets you fetch maximum session time, time remaining, and idle time when querying attributes over the REST interface (OPENAM-801<sup>16</sup>).
- OpenAM now supports a refresh parameter to reset session idle time to 0 when querying attributes over the REST interface (OPENAM-800<sup>17</sup>).
- OpenAM now supports time zone policy settings using the RFC 822 format, +/-0000 (OPENAM-791<sup>18</sup>).

<sup>17</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-800>

<sup>18</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-791>

- 
- OpenAM session service now lets you set the maximum session time, maximum idle time, and maximum caching time when assigning service to the user through the console (OPENAM-785<sup>19</sup>).
  - OpenAM now returns a load balancer cookie, if configured, to an authentication request over the REST interface (OPENAM-766<sup>20</sup>).
  - OpenAM ClusterStateService now works with HTTPS endpoints (OPENAM-759<sup>21</sup>). When using HTTPS endpoints, set `com.sun.identity.urlchecker.dorequest=false`.
  - OpenAM now bundles `click-nodeps.jar` (OPENAM-646<sup>22</sup>).
  - OpenAM now provides additional statistics related to session failover (OPENAM-641<sup>23</sup>).
  - The OpenAM **amsfo** script now starts the session database only after the message queue is up and running (OPENAM-624<sup>24</sup>).
  - OpenAM .NET fedlets now support encrypted assertions (OPENAM-604<sup>25</sup>).
  - The Administration Tools setup script now has better default settings (OPENAM-577<sup>26</sup>).
  - The OpenAM console configuration wizard now suggests better values for cookie domains (OPENAM-576<sup>27</sup>).
  - OpenAM .jar files now contain standard MANIFEST entries (OPENAM-570<sup>28</sup>).
  - The **ssoadm** can now decode an encrypted password stored in the password file (OPENAM-569<sup>29</sup>).
  - You can now configure the HOTP authentication module email from address using OpenAM console (OPENAM-513<sup>30</sup>).
  - The OpenAM console page `Debug.jsp` (such as `http://openam.example.com:8080/openam/Debug.jsp`) now can set the log level for

<sup>29</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-569>

<sup>30</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-513>

---

any debug instance (OPENAM-511<sup>31</sup>). See the Debug instances drop-down list at the top of the page.

- OpenAM now provides a property, `openam.authentication.ignore_goto_during_logout`, to set whether to ignore logout goto URLs, and instead display the Logout page (OPENAM-494<sup>32</sup>).
- OpenAM now provides support for multiple failover servers in the RADIUS authentication module (OPENAM-477<sup>33</sup>).
- OpenAM now provides a mechanism to control which session properties are copied during session upgrade (OPENAM-462<sup>34</sup>).
- OpenAM now provides session timeout notification (OPENAM-457<sup>35</sup>). The improvement implements a hook for timeout into the session service on the server side. It listens for timeouts on all sessions.
- The OpenAM authentication service now can map HTTP headers when forwarding requests (OPENAM-453<sup>36</sup>). This applies both to the distributed and centralized authentication services. See configuration properties `openam.retained.http.headers` and `openam.forbidden.to.copy.headers`.
- The OpenAM session service now lets you extend quota exhaustion actions with a plugin (OPENAM-433<sup>37</sup>).

To add a new plugin, update the `amSession.properties` files with the appropriate internationalization keys, and place your plugin class either in `WEB-INF/classes` or `WEB-INF/lib` where you deployed OpenAM. Next, add your implementation using the **ssoadm** command.

```
$ ssoadm
set-attr-choicevals
--servicename iPlanetAMSessionService
--schematype Global
--attributename iplanet-am-session-constraint-handler
--adminid amadmin
--password-file .pass
--add
--choicevalues mykey=demo.Clazz
```

Here, *mykey* is the internationalization key you added to `amSession.properties` files, and *demo.Clazz* is the fully qualified class name for your plugin class.

---

<sup>31</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-511>

<sup>32</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-494>

<sup>33</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-477>

<sup>34</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-462>

<sup>35</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-457>

<sup>36</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-453>

<sup>37</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-433>

---

You can remove the plugin using the **ssoadm remove-attr-choicevals** command, and list quota exhaustion actions using the **ssoadm get-attr-choicevals** command.

- OpenAM now tracks monitoring information for LDAP connection pools (OPENAM-410<sup>38</sup>). OpenAM monitoring exposes the minimum size of the pool, the maximum size of the pool, the high water mark of the pool, the current size of the pool, the number of connections retrieved, the number of connections created, and the number of connections destroyed.
- OpenAM Windows Desktop SSO now provides a mechanism to fail attempted authentication when Kerberos-authenticated user has no profile in the OpenAM data store (OPENAM-403<sup>39</sup>).
- OpenAM now handles Active Directory password expiration responses properly (OPENAM-258<sup>40</sup>).
- OpenAM password reset now uses realm aliases to find realms for end users, eliminating the need to add a realm parameter to the URL (OPENAM-192<sup>41</sup>).
- OpenAM now allows time-based rotation, and also file name prefixes and suffixes for regular and debug logs. (OPENAM-41<sup>42</sup>, OPENAM-42<sup>43</sup>)
- For cross domain single sign on and SAML 2.0 authentication, users were presented with a blank login page during authentication, in fact a page containing forms with hidden fields used to process authentication. OpenAM now provides templates so you can show users something besides than blank pages, such as for example a page with an animated .gif progress bar (OPENAM-9<sup>44</sup>).

For cross domain single sign on, edit a copy of the file config/federation/default/cdclogin.jsp where you unpacked the OpenAM web application (for example /path/to/tomcat/webapps/openam/config/federation/default/cdclogin.jsp). You can change the presentation as appropriate for your deployment. Make sure you retain the form and JavaScript to ensure requests are processed properly. Then replace config/federation/default/cdclogin.jsp with your version.

---

<sup>38</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-410>

<sup>39</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-403>

<sup>40</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-258>

<sup>41</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-192>

<sup>42</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-41>

<sup>43</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-42>

<sup>44</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-9>

---

For SAML 2.0, modify the templates `saml2login.template`<sup>45</sup> and `saml2loginwithrelay.template`<sup>46</sup> to change the presentation, retaining the form and JavaScript. Then copy your templates under the `WEB-INF/classes/` directory where you unpacked the OpenAM web application (for example `/path/to/tomcat/webapps/openam/WEB-INF/classes/`).

<sup>45</sup> <http://sources.forgerock.org/browse/openam/trunk/opensso/products/federation/library/resources/saml2login.template?r=HEAD>

<sup>46</sup> <http://sources.forgerock.org/browse/openam/trunk/opensso/products/federation/library/resources/saml2loginwithrelay.template?r=HEAD>

---

## Chapter 2. Before You Install OpenAM Software

This chapter covers software and hardware prerequisites for installing and running OpenAM software. If you have a special request to support a component or combination not listed here, contact ForgeRock at [info@forgerock.com](mailto:info@forgerock.com)<sup>1</sup>.

### 2.1. Java Requirements

This release of OpenAM requires Java Development Kit 1.6, at least 1.6.0\_10. ForgeRock recommends that you use at least version 1.6.0\_27 due to security fixes.

ForgeRock has tested this release of OpenAM primarily with Oracle Java SE JDK.

OpenAM Java SDK requires Java Development Kit 1.5 or 1.6.

### 2.2. Web Application Container Requirements

This release of OpenAM runs in the following web application containers.

- Apache Tomcat 6.0.x, 7.0.x
- GlassFish v2
- JBoss Enterprise Application Platform 4.x, 5.x  
JBoss Application Server 7.x
- Jetty 7
- Oracle WebLogic Server 11g  
Oracle WebLogic Server 12c

If running as a non-root user, the web application container must be able to write to its own home directory, where OpenAM stores configuration files.

### 2.3. Data Store Requirements

This release of OpenAM works with the following configuration data stores.

- Embedded (using ForgeRock OpenDJ 2.4.5 for the data store)

When using the embedded configuration store, you must deploy OpenAM on a local file system and not on an NFS-mounted file system.

---

<sup>1</sup> <mailto:info@forgerock.com>

- External ForgeRock OpenDJ data store
- External Sun OpenDS data store
- External Oracle Directory Server Enterprise Edition data store

This release of OpenAM works with the following user profile data stores.

- ForgeRock OpenDJ
- Microsoft Active Directory
- IBM Tivoli Directory Server
- OpenDS
- Oracle Directory Server Enterprise Edition

OpenAM also works with OpenLDAP and other LDAPv3 compliant directory servers. Some features of OpenAM depend on features supported by your directory service, such as the following:

- Extensible LDAP schema, required to extend the schema for OpenAM. First, install OpenAM to use a fresh instance of OpenDJ, such as the embedded OpenDJ server. After installation, study the custom schema definitions from the OpenDJ file, `config/schema/99-user.ldif`, to see what schema definitions you must add to your directory. You might need to adapt the schema definition format before adding the definitions to your directory.
- The persistent search request control (OID: 2.16.840.1.113730.3.4.3).
- The Behera Internet-Draft Password Policy for LDAP Directories<sup>2</sup> (for OpenAM password reset, for example)

If you plan to deploy with OpenLDAP or other LDAPv3 directory for user data, make sure you test your solution before you deploy to ensure all OpenAM features that you use work as expected.

## 2.4. Browsers Tested

ForgeRock has tested many browsers with OpenAM console and end user pages, including the following browsers.

- Chrome and Chromium 16 and later
- Firefox 3.6 and later
- Internet Explorer 7 and later

---

<sup>2</sup> <http://tools.ietf.org/html/draft-behera-ldap-password-policy-09>

- Safari 5 and later

## 2.5. Platform Requirements

ForgeRock has tested this release of OpenAM on the following platforms.

- Linux 2.6, 3.0
- Microsoft Windows Server 2003, 2008
- Oracle Solaris 10

## 2.6. Hardware Requirements

You can deploy OpenAM on any hardware supported for the combination of software required. Deploying OpenAM requires a minimum of 1 GB free RAM over and above the RAM used by all other software on the system.

ForgeRock has tested this release of OpenAM primarily on x86 and x64 based systems.

---

## Chapter 3. OpenAM Changes & Deprecated Functionality

This chapter covers both major changes to existing functionality, and also deprecated and removed functionality.

### 3.1. Major Changes to Existing Functionality

- The following web policy agents are compatible with OpenAM 10.0.0.

- Apache 2.0
- Apache 2.2
- Microsoft IIS 6
- Microsoft IIS 7

The following J2EE policy agents are compatible with OpenAM 10.0.0.

- GlassFish v2 & v3
- JBoss v4.2 & v5.x
- Jetty v6.1 & v7
- Tomcat v6
- WebSphere v6.1
- WebLogic v10
- Prior to OpenAM 9.5.2, trailing slashes (/) were ignored when matching resource names in policy evaluation. Therefore, /-\*- matched /secret, but also /secret/, short for /secret/index.html on most web servers.

Now, /-\*- matches /secret, but not /secret/.

- Since OpenAM 9.5.3, application shutdown hooks are no longer registered by default. This change only has an effect on standalone and web applications that use the OpenAM Client SDK. The changes do not affect OpenAM, distributed authentication services, or the Java EE policy agents.

For Java EE applications, ensure the OpenAM client SDK shuts down successfully by including the following context listener in your application's web.xml file.

```
<listener>
```

```
<listener-class>  
  com.sun.identity.common.ShutdownServletContextListener  
</listener-class>  
</listener>
```

For standalone applications, set the following JVM property.

```
-Dopenam.runtime.shutdown.hook.enabled=true
```

## 3.2. Deprecated Functionality

The following functionality is deprecated in OpenAM 10.0.0.

- The Netscape LDAP API is to be removed from OpenAM, with OpenAM using the OpenDJ LDAP SDK instead. This affects all classes in `com.sun.identity.shared.ldap.*` packages.
- Support for Liberty Identity Web Services Framework (ID-WSF) is deprecated. The functionality is likely to be removed in a future release.
- OpenAM currently uses Sun Java System Application Framework (JATO). JATO is deprecated and is likely to be replaced in a future release.

## 3.3. Removed Functionality

OpenAM 10.0.0 does not include the **amtune** command.

OpenAM console only mode is no longer supported. Console only mode is likely to be replaced with a different solution in a future release.

The Test Beta Console has been removed. Its functionality is currently available through the **ssoadm** command.

OpenAM no longer includes the SafeWord and Unix authentication modules.

---

## Chapter 4. OpenAM Fixes, Limitations, & Known Issues

OpenAM issues are tracked at <https://bugster.forgerock.org/jira/browse/OPENAM>. This chapter covers the status of key issues and limitations at release 10.0.0.

### Note

This release contains fixes that resolve security issues within OpenAM. Older versions of OpenAM contain these security issues. It is recommended that you upgrade to this release to resolve these security issues. ForgeRock customers can contact support for details on the security issues.

### 4.1. Fixes

The following issues were fixed in release 10.0.0.

- OPENAM-1238<sup>1</sup>: inline help in auth modules is broken after upgrade
- OPENAM-1235<sup>2</sup>: Merged debug log doesn't rotate
- OPENAM-1215<sup>3</sup>: DAS forgets original login URL with multi-step modules
- OPENAM-1210<sup>4</sup>: amsessiondb sets OS\_ARCH twice, ignoring customization to the first property
- OPENAM-1209<sup>5</sup>: DNS lookups in DNOrIPAddressListTokenRestriction should be truly optional
- OPENAM-1177<sup>6</sup>: NullPointerException within FAMSTSImp
- OPENAM-1172<sup>7</sup>: Can't config User Status Active Value and User Status Inactive Value for Active Directory data store
- OPENAM-1135<sup>8</sup>: The IdP does not sign the SAML2 Logout Response when using HTTP-POST binding when the SP has asked to sign them

---

<sup>1</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1238>

<sup>2</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1235>

<sup>3</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1215>

<sup>4</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1210>

<sup>5</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1209>

<sup>6</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1177>

<sup>7</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1172>

<sup>8</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-1135>

- OPENAM-1132<sup>9</sup>: Extensive logging in IdentityServicesImpl
- OPENAM-1125<sup>10</sup>: Request serialization does not work in subrealm with DAS
- OPENAM-1123<sup>11</sup>: LDAPException with -1 resultCode can cause MissingResourceException
- OPENAM-1121<sup>12</sup>: Problem when a SAML2 Single Logout Request lands in the OpenAM that did not issue the original assertion
- OPENAM-1104<sup>13</sup>: CDCServlet doesn't work if custom authentication was used
- OPENAM-1103<sup>14</sup>: Client IP validation does not work with Federation
- OPENAM-1100<sup>15</sup>: OAuth provider does not work with subrealms
- OPENAM-1086<sup>16</sup>: The SAML2 IdP Adapter does not get called when using IdP Initiated SSO
- OPENAM-1083<sup>17</sup>: Using Federation redirects with the valid goto URL whitelist causes problems
- OPENAM-1071<sup>18</sup>: amadmin can't login when AM SDK cache is disabled
- OPENAM-1069<sup>19</sup>: createSSOToken(request) does not honor client IP header settings
- OPENAM-1064<sup>20</sup>: NPE when SDK cache is disabled
- OPENAM-1061<sup>21</sup>: Deadlock in LDAPv3Repo
- OPENAM-1057<sup>22</sup>: OpenAM Upgrade decision based on build date
- OPENAM-1049<sup>23</sup>: Exceptions in IdRepo debug log after upgrade to OpenAM 10

- OPENAM-16<sup>181</sup>: Deadlock when making Entitlements REST requests

## 4.2. Limitations

ForgeRock supports the stable software releases that you can download from ForgeRock, not nightly builds or pre-release software. ForgeRock OpenAM downloads do not include OpenAM extensions. Therefore, ForgeRock does not support OpenAM extensions. If you have a special request for capabilities not currently in a software release, contact ForgeRock at [info@forgerock.com](mailto:info@forgerock.com)<sup>182</sup>.

Do not run different versions of OpenAM together in the same OpenAM site.

Not all features of OpenAM work with IPv6.

The Database Repository type of data store is experimental and not supported for production use.

By default OpenAM does not enforce session quotas when running in Site mode without session failover. To work around this behavior, set the server configuration property `openam.session.useLocalSessionsInMultiServerMode=true`. You can set this property in OpenAM console under Configuration > Servers and Sites > Servers > Server Name > Advanced.

## 4.3. Known Issues

The following important known issues remained open at the time release 10.0.0 became available.

- OPENAM-1253<sup>183</sup>: Multi-server OpenAM instances fail to connect after configuration
- OPENAM-1252<sup>184</sup>: ssoadm loses exception causes
- OPENAM-1250<sup>185</sup>: Installation failing on Websphere 8

---

<sup>179</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-25>

<sup>180</sup> <https://bugster.forgerock.org/jira/browse/OPENAM-20>

## Chapter 5. How to Report Problems & Provide Feedback

If you have questions regarding OpenAM which are not answered by the documentation, there is a mailing list which can be found at <https://lists.forgerock.org/mailman/listinfo/openam> where you are likely to find an answer.

If you have found issues or reproducible bugs within OpenAM 10.0.0, report them in <https://bugster.forgerock.org>.

When requesting help with a problem, include the following information:

- Description of the problem, including when the problem occurs and its impact on your operation
- Machine type, operating system version, web container and version, Java version, and OpenAM release version, including any patches or other software that might be affecting the problem
- Steps to reproduce the problem
- Any relevant access and error logs, stack traces, or core dumps

---

## Chapter 6. Support

You can purchase OpenAM support subscriptions and training courses from ForgeRock and from consulting partners around the world and in your area. To contact ForgeRock, send mail to [info@forgerock.com](mailto:info@forgerock.com)<sup>1</sup>. To find a partner in your area, see <http://www.forgerock.com/partners.html>.
